The report requires updating with new data and is sent in 48 hours after order is placed.

The global Electronic Multimedia Card market size is predicted to grow from US$ 61.4 million in 2025 to US$ 90.8 million in 2031; it is expected to grow at a CAGR of 6.7% from 2025 to 2031.

The electronic multimedia card is a small (erasable solid-state memory card used especially in mobile phones and digital video and other mobile terminals. This portable, reliable and lightweight standard data carrier is capable of storing up to 1 GB of information material, which is equivalent to 640,000 pages of information in a book.

Although MMC cards were widely used in multimedia devices in the early years of their introduction, more advanced, higher-capacity memory card standards, such as SD cards and microSD cards, have gradually replaced MMC cards over time. These new standards offer greater storage capacity, faster transfer speeds, and better compatibility. Due to the popularity of more advanced memory card standards, the use of MMC cards in multimedia devices is gradually decreasing. However, there are still specific areas or older devices that may continue to use MMC cards. As storage technology continues to advance and new memory card standards and technologies emerge, the technical features and performance of MMC cards are gradually being surpassed by more advanced storage technologies. Despite its diminishing use, the MMC card still has some historical value and represents the early stages of memory card technology.
