Abstracts

The global Electronic Parking Brake (EPB) System market size is predicted to grow from US\$ 6104 million in 2025 to US\$ 11442 million in 2032; it is expected to grow at a CAGR of 9.4% from 2026 to 2032.

Electronic Parking Brake (EPB) System is an electromechanical braking system that applies, releases, and maintains vehicle parking force through electronically controlled actuators rather than a conventional mechanical handbrake or foot-operated parking mechanism. A typical system integrates an electric motor, reduction mechanism, parking brake actuator, brake caliper or cable/drum mechanism, control electronics, sensors, switches, and related software functions. The system converts electronic commands into controlled mechanical clamping or pulling force and can coordinate with vehicle stability control, Auto Hold, hill-start assistance, emergency braking, and other chassis functions. The research scope focuses on system-level EPB assemblies used in passenger vehicles and light commercial vehicles, including motor-on-caliper, cable-puller, and motor-on-drum architectures as well as standalone and integrated control configurations. Product performance is primarily determined by clamping-force capability, actuator efficiency, response consistency, durability, noise, residual drag, functional safety, control integration, and packaging efficiency.

Key Findings

Global Electronic Parking Brake (EPB) System sales reached approximately 52 million systems in 2025

The manufacturer-level blended average selling price was approximately US\$120 per system in 2025

Gross margins of major Electronic Parking Brake (EPB) System manufacturers were approximately 20%–25%

Motor-on-Caliper Type is the mainstream architecture for passenger vehicle applications

Asia-Pacific is the leading regional market for Electronic Parking Brake (EPB) System demand and manufacturing

Market Trends

Electronic Parking Brake (EPB) System development is moving from simple replacement of mechanical parking brakes toward deeper integration with vehicle braking, chassis control, and automated driving functions. Motor-on-caliper architectures are increasingly favored because they reduce mechanical linkage, simplify vehicle packaging, and enable closer coordination with electronic brake control. Current commercial products also emphasize lower residual drag, higher clamping-force density, faster actuation, durability, and compatibility with passenger cars and light commercial vehicles; leading commercial platforms already cover clamping forces from approximately 13.5 kN to 25 kN and support autonomous parking and redundancy-related functions. Control architecture is also becoming more integrated. EPB functions are increasingly embedded in ESC, integrated brake control, or electro-hydraulic braking platforms, while backup controllers and redundant actuation concepts are being developed for vehicles with higher levels of automation.

Market Dynamics

Drivers

Growth in Electronic Parking Brake (EPB) System demand is supported by increasing adoption of electronic chassis functions, Auto Hold, automated parking, electric vehicles, and more highly integrated cockpit and braking architectures. Replacing the mechanical handbrake also releases interior packaging space and enables software-controlled parking, hill-hold, emergency braking, and vehicle-state coordination. Large-scale field deployment has materially reduced commercialization risk: ZF reports more than 250 million EPB calipers operating on global roads, demonstrating that the technology is already established as a high-volume braking solution rather than a premium-only feature. Continued vehicle electrification and software-defined chassis

development are expected to reinforce demand for electronically controlled parking functions.

Restraints

Electronic Parking Brake (EPB) System remains more expensive and technically complex than basic mechanical parking brakes because it requires motors, reduction mechanisms, electronic controllers, sensors, wiring, software validation, and diagnostic capabilities. OEMs also impose stringent requirements for clamping-force repeatability, low-temperature operation, water and corrosion resistance, brake-pad wear compensation, noise, electromagnetic compatibility, and long-duration parking-force retention. The need to meet functional-safety requirements increases development and validation costs, while aggressive automotive sourcing and annual cost-reduction requirements limit the ability of suppliers to fully monetize added functionality. In cost-sensitive entry-level vehicles, conventional mechanical solutions can therefore remain economically competitive.

Opportunities

The largest opportunities lie in further penetration of Electronic Parking Brake (EPB) System into cost-sensitive vehicle platforms, light commercial vehicles, emerging automotive markets, and higher-load applications requiring greater clamping force. Localized production is becoming more important as OEMs seek shorter supply chains and competitive sourcing; for example, localized EPB production continues to expand in India, where major braking suppliers have established or expanded domestic manufacturing for passenger vehicle programs. Redundant EPB control, high-capacity dual-piston designs, motor-on-drum configurations, and integration with electronic brake systems provide additional product-development opportunities. As braking systems progress toward brake-by-wire, EPB suppliers with strong actuator, software, functional-safety, and system-integration capabilities can expand beyond standalone parking-brake functions into broader intelligent chassis platforms.

Challenges

The principal long-term challenge is the transition from a standalone parking-brake component toward a highly integrated safety-critical braking function. Suppliers must coordinate mechanical calipers, actuators, ECUs, vehicle networks, cybersecurity, diagnostic software, and braking-control algorithms while maintaining predictable performance across temperature, wear, voltage, and vehicle-load conditions.

Redundancy requirements for automated driving further increase hardware and software complexity. At the same time, emerging electromechanical brake and brake-by-wire architectures may progressively absorb parking functions into broader wheel-end braking systems, potentially reducing the long-term independence of the conventional EPB product category. Suppliers therefore need to balance continued cost reduction in mature EPB platforms with investment in next-generation integrated braking technologies.

Industry Chain Analysis

The upstream Electronic Parking Brake (EPB) System supply chain includes electric motors, permanent magnets, copper wire, reduction gears, bearings, cast-iron or aluminum caliper components, brake pads, cables, engineering plastics, seals, connectors, wiring harnesses, MCUs, power semiconductors, PCBs, sensors, and other electronic control components. Mechanical precision, motor efficiency, actuator durability, friction-material performance, semiconductor reliability, and sealing quality directly influence clamping-force consistency and system life. Compared with a traditional parking brake, a larger share of product value is concentrated in electromechanical actuation, electronics, embedded software, and validation rather than in purely mechanical components.

Midstream manufacturers integrate actuators, calipers or cable/drum mechanisms, controllers, sensors, and software into complete Electronic Parking Brake (EPB) System solutions and conduct functional-safety validation, endurance testing, environmental testing, vehicle calibration, and production quality control. Downstream customers are primarily passenger vehicle and light commercial vehicle manufacturers, with EPB increasingly integrated into broader ESC, electronic brake control, and intelligent chassis architectures. Large cumulative production volumes at established suppliers demonstrate that manufacturing scale, process control, software integration, and OEM platform experience have become important competitive barriers; one major Chinese supplier reported cumulative EPB production exceeding 20 million systems by late 2025.

Segment Insights

Motor-on-Caliper Type represents the mainstream product architecture because the actuator is directly integrated with the brake caliper, reducing cables and mechanical transmission components while supporting compact packaging and electronic control. Commercial products increasingly combine high clamping force, low residual drag, pad-

wear compensation, and coordination with vehicle control systems. Cable Puller Type retains relevance where OEMs seek to electrify an existing mechanical parking-brake architecture with limited redesign, while Motor-on-Drum Type provides an alternative for selected cost-sensitive and drum-brake applications.

In terms of control architecture, Integrated Control Type is becoming increasingly important as the EPB function is incorporated into ESC, electronic brake control, or integrated chassis controllers, reducing standalone ECU requirements and supporting more coordinated vehicle functions. Standalone Control Type remains relevant for platforms requiring modularity or independent parking-brake control. By maximum clamping force, products above 20 kN address heavier or higher-performance vehicles, while lower-force systems remain suitable for compact and mainstream passenger vehicles. The commercial availability of EPB systems spanning approximately 13.5–25 kN demonstrates the breadth of current platform requirements.

Downstream Market Opportunities

Sedans and SUVs form the core downstream market for Electronic Parking Brake (EPB) System, supported by high penetration of electronic chassis functions and increasing adoption of Auto Hold and automated parking. MPVs offer additional demand where convenience, cabin packaging, and automatic parking functions are important, while light commercial vehicles represent a further penetration opportunity as electronically controlled braking expands beyond passenger vehicles. ZF's current EPB portfolio explicitly covers both passenger cars and light commercial vehicle applications, confirming the commercial expansion of EPB beyond conventional passenger-car platforms. Higher-force systems, integrated control functions, and durable motor-on-caliper solutions are particularly relevant to SUVs, larger MPVs, and light commercial platforms.

Regional Insights

Asia-Pacific is the leading regional market for Electronic Parking Brake (EPB) System, supported by the scale of vehicle production in China, Japan, South Korea, India, and other Asian manufacturing hubs, together with an increasingly complete local brake-system supplier base. OICA reported that global vehicle production reached 96.4 million units in 2025 and that industry growth continued to shift toward Asia, reinforcing the region's importance to high-volume chassis components. China combines high vehicle output with rapidly expanding domestic intelligent-chassis suppliers, while Japan and South Korea maintain strong established Tier 1 capabilities. India is emerging as an

important localization opportunity, with EPB manufacturing increasingly introduced into locally produced passenger vehicle programs.

Europe remains a mature Electronic Parking Brake (EPB) System market with strong adoption of integrated braking technologies, premium chassis functions, and advanced brake-by-wire development. North America offers opportunities in larger passenger vehicles, SUVs, pickups, and electrified platforms, where higher clamping-force requirements and advanced electronic braking functions support higher-value solutions. Regional competition is increasingly shaped by local manufacturing, OEM platform relationships, software calibration capability, and the ability to support global vehicle programs from multiple production locations.

Competitive Landscape Analysis

The Electronic Parking Brake (EPB) System market is characterized by competition between established global chassis Tier 1 suppliers and increasingly capable independent Asian braking-system manufacturers. Global suppliers generally compete through extensive OEM relationships, mature motor-on-caliper platforms, global production footprints, validation experience, and integration with ESC and brake-by-wire systems. Chinese suppliers are strengthening their position through cost efficiency, rapid engineering cycles, local OEM access, and increasing control-software capability; cumulative mass-production milestones demonstrate that several domestic suppliers have already moved beyond small-scale substitution into large-volume platform supply. Competitive differentiation is increasingly shifting from the mechanical EPB unit itself toward actuator efficiency, low drag, clamping-force control, software integration, functional safety, redundancy, and compatibility with next-generation intelligent chassis architectures. Supplier competitiveness will therefore depend on the ability to combine high-volume manufacturing economics with continuous investment in electronic control and system-level braking technologies.

Report Scope

LP Information, Inc. (LPI) ' newest research report, the "Electronic Parking Brake (EPB) System Industry Forecast" looks at past sales and reviews total world Electronic Parking Brake (EPB) System sales in 2025, providing a comprehensive analysis by region and market sector of projected Electronic Parking Brake (EPB) System sales for 2026 through 2032. With Electronic Parking Brake (EPB) System sales broken down by region, market sector and sub-sector, this report provides a detailed analysis in US\$ millions of the world Electronic Parking Brake (EPB) System industry.

This Insight Report provides a comprehensive analysis of the global Electronic Parking Brake (EPB) System landscape and highlights key trends related to product segmentation, company formation, revenue, and market share, latest development, and M&A activity. This report also analyzes the strategies of leading global companies with a focus on Electronic Parking Brake (EPB) System portfolios and capabilities, market entry strategies, market positions, and geographic footprints, to better understand these firms' unique position in an accelerating global Electronic Parking Brake (EPB) System market.

This Insight Report evaluates the key market trends, drivers, and affecting factors shaping the global outlook for Electronic Parking Brake (EPB) System and breaks down the forecast by Type, by Application, geography, and market size to highlight emerging pockets of opportunity. With a transparent methodology based on hundreds of bottom-up qualitative and quantitative market inputs, this study forecast offers a highly nuanced view of the current state and future trajectory in the global Electronic Parking Brake (EPB) System.

This report presents a comprehensive overview, market shares, and growth opportunities of Electronic Parking Brake (EPB) System market by product type, application, key manufacturers and key regions and countries.

Market Segmentation

Segmentation by Type:

Motor-on-Caliper Type

Cable Puller Type

Motor-on-Drum Type

Segmentation by Control Architecture:

Standalone Control Type

Integrated Control Type

Segmentation by Maximum Clamping Force:

?15 kN

?15–20 kN

?20 kN

Segmentation by Application:

Sedan

SUV

MPV

Light Commercial Vehicle

Other

This report also splits the market by region:

Americas

United States

Canada

Mexico

Brazil

APAC

China

Japan

Korea

Southeast Asia

India

Australia

Europe

Germany

France

UK

Italy

Russia

Middle East & Africa

Egypt

South Africa

Israel

Turkey

GCC Countries

The below companies that are profiled have been selected based on inputs gathered from primary experts and analysing the company's coverage, product portfolio, its

market penetration.

ZF Friedrichshafen

AUMOVIO

ADVICS

HL Mando

Hyundai Mobis

Brembo

Astemo

Brakes India

HANSAE MOBILITY

K?ster Automotive

Bethel Automotive Safety Systems

Zhejiang Asia-Pacific Mechanical & Electronic

Shanghai Tongyu Automotive Technology

BeijingWest Industries

Zhejiang Libang Hexin Automotive Brake System

Key Questions Addressed in this Report

What is the 10-year outlook for the global Electronic Parking Brake (EPB) System market?

What factors are driving Electronic Parking Brake (EPB) System market growth, globally and by region?

Which technologies are poised for the fastest growth by market and region?

How do Electronic Parking Brake (EPB) System market opportunities vary by end market size?

How does Electronic Parking Brake (EPB) System break out by Type, by Application?

Contents

1 SCOPE OF THE REPORT

- 1.1 Market Introduction
- 1.2 Years Considered
- 1.3 Research Objectives
- 1.4 Market Research Methodology
- 1.5 Research Process and Data Source
- 1.6 Economic Indicators
- 1.7 Currency Considered
- 1.8 Market Estimation Caveats

2 EXECUTIVE SUMMARY

2.1 World Market Overview

- 2.1.1 Global Electronic Parking Brake(EPB) System Annual Sales 2021-2032
- 2.1.2 World Current & Future Analysis for Electronic Parking Brake(EPB) System by Geographic Region, 2021, 2025 & 2032
- 2.1.3 World Current & Future Analysis for Electronic Parking Brake(EPB) System by Country/Region, 2021, 2025 & 2032
- 2.2 Electronic Parking Brake(EPB) System Segment by Type
 - 2.2.1 Cable Pulling System
 - 2.2.2 Electro-hydraulic Caliper System
 - 2.2.3 Fully Electric Drive-by-wire System
 - 2.2.4 Electronic Parking Brake(EPB) System Sales by Type
 - 2.2.4.1 Global Electronic Parking Brake(EPB) System Sales Market Share by Type (2021-2026)
 - 2.2.4.2 Global Electronic Parking Brake(EPB) System Revenue and Market Share by Type (2021-2026)
 - 2.2.4.3 Global Electronic Parking Brake(EPB) System Sale Price by Type (2021-2026)

2.3 Electronic Parking Brake(EPB) System Segment by Application

- 2.3.1 Sedans
- 2.3.2 SUVs
- 2.3.3 Other
- 2.3.4 Electronic Parking Brake(EPB) System Sales by Application
 - 2.3.4.1 Global Electronic Parking Brake(EPB) System Sale Market Share by Application (2021-2026)

2.3.4.2 Global Electronic Parking Brake(EPB) System Revenue and Market Share by Application (2021-2026)

2.3.4.3 Global Electronic Parking Brake(EPB) System Sale Price by Application (2021-2026)

3 GLOBAL BY COMPANY

3.1 Global Electronic Parking Brake(EPB) System Breakdown Data by Company

3.1.1 Global Electronic Parking Brake(EPB) System Annual Sales by Company (2021-2026)

3.1.2 Global Electronic Parking Brake(EPB) System Sales Market Share by Company (2021-2026)

3.2 Global Electronic Parking Brake(EPB) System Annual Revenue by Company (2021-2026)

3.2.1 Global Electronic Parking Brake(EPB) System Revenue by Company (2021-2026)

3.2.2 Global Electronic Parking Brake(EPB) System Revenue Market Share by Company (2021-2026)

3.3 Global Electronic Parking Brake(EPB) System Sale Price by Company

3.4 Key Manufacturers Electronic Parking Brake(EPB) System Producing Area Distribution, Sales Area, Product Type

3.4.1 Key Manufacturers Electronic Parking Brake(EPB) System Product Location Distribution

3.4.2 Players Electronic Parking Brake(EPB) System Products Offered

3.5 Market Concentration Rate Analysis

3.5.1 Competition Landscape Analysis

3.5.2 Concentration Ratio (CR3, CR5 and CR10) & (2024-2026)

3.6 New Products and Potential Entrants

3.7 Market M&A Activity & Strategy

4 WORLD HISTORIC REVIEW FOR ELECTRONIC PARKING BRAKE(EPB) SYSTEM BY GEOGRAPHIC REGION

4.1 World Historic Electronic Parking Brake(EPB) System Market Size by Geographic Region (2021-2026)

4.1.1 Global Electronic Parking Brake(EPB) System Annual Sales by Geographic Region (2021-2026)

4.1.2 Global Electronic Parking Brake(EPB) System Annual Revenue by Geographic Region (2021-2026)

4.2 World Historic Electronic Parking Brake(EPB) System Market Size by Country/Region (2021-2026)

4.2.1 Global Electronic Parking Brake(EPB) System Annual Sales by Country/Region (2021-2026)

4.2.2 Global Electronic Parking Brake(EPB) System Annual Revenue by Country/Region (2021-2026)

4.3 Americas Electronic Parking Brake(EPB) System Sales Growth

4.4 APAC Electronic Parking Brake(EPB) System Sales Growth

4.5 Europe Electronic Parking Brake(EPB) System Sales Growth

4.6 Middle East & Africa Electronic Parking Brake(EPB) System Sales Growth

5 AMERICAS

5.1 Americas Electronic Parking Brake(EPB) System Sales by Country

5.1.1 Americas Electronic Parking Brake(EPB) System Sales by Country (2021-2026)

5.1.2 Americas Electronic Parking Brake(EPB) System Revenue by Country (2021-2026)

5.2 Americas Electronic Parking Brake(EPB) System Sales by Type (2021-2026)

5.3 Americas Electronic Parking Brake(EPB) System Sales by Application (2021-2026)

5.4 United States

5.5 Canada

5.6 Mexico

5.7 Brazil

6 APAC

6.1 APAC Electronic Parking Brake(EPB) System Sales by Region

6.1.1 APAC Electronic Parking Brake(EPB) System Sales by Region (2021-2026)

6.1.2 APAC Electronic Parking Brake(EPB) System Revenue by Region (2021-2026)

6.2 APAC Electronic Parking Brake(EPB) System Sales by Type (2021-2026)

6.3 APAC Electronic Parking Brake(EPB) System Sales by Application (2021-2026)

6.4 China

6.5 Japan

6.6 South Korea

6.7 Southeast Asia

6.8 India

6.9 Australia

6.10 China Taiwan

7 EUROPE

7.1 Europe Electronic Parking Brake(EPB) System by Country

7.1.1 Europe Electronic Parking Brake(EPB) System Sales by Country (2021-2026)

7.1.2 Europe Electronic Parking Brake(EPB) System Revenue by Country (2021-2026)

7.2 Europe Electronic Parking Brake(EPB) System Sales by Type (2021-2026)

7.3 Europe Electronic Parking Brake(EPB) System Sales by Application (2021-2026)

7.4 Germany

7.5 France

7.6 UK

7.7 Italy

7.8 Russia

8 MIDDLE EAST & AFRICA

8.1 Middle East & Africa Electronic Parking Brake(EPB) System by Country

8.1.1 Middle East & Africa Electronic Parking Brake(EPB) System Sales by Country (2021-2026)

8.1.2 Middle East & Africa Electronic Parking Brake(EPB) System Revenue by Country (2021-2026)

8.2 Middle East & Africa Electronic Parking Brake(EPB) System Sales by Type (2021-2026)

8.3 Middle East & Africa Electronic Parking Brake(EPB) System Sales by Application (2021-2026)

8.4 Egypt

8.5 South Africa

8.6 Israel

8.7 Turkey

8.8 GCC Countries

9 MARKET DRIVERS, CHALLENGES AND TRENDS

9.1 Market Drivers & Growth Opportunities

9.2 Market Challenges & Risks

9.3 Industry Trends

10 MANUFACTURING COST STRUCTURE ANALYSIS

10.1 Raw Material and Suppliers

- 10.2 Manufacturing Cost Structure Analysis of Electronic Parking Brake(EPB) System
- 10.3 Manufacturing Process Analysis of Electronic Parking Brake(EPB) System
- 10.4 Industry Chain Structure of Electronic Parking Brake(EPB) System

11 MARKETING, DISTRIBUTORS AND CUSTOMER

- 11.1 Sales Channel
 - 11.1.1 Direct Channels
 - 11.1.2 Indirect Channels
- 11.2 Electronic Parking Brake(EPB) System Distributors
- 11.3 Electronic Parking Brake(EPB) System Customer

12 WORLD FORECAST REVIEW FOR ELECTRONIC PARKING BRAKE(EPB) SYSTEM BY GEOGRAPHIC REGION

- 12.1 Global Electronic Parking Brake(EPB) System Market Size Forecast by Region
 - 12.1.1 Global Electronic Parking Brake(EPB) System Forecast by Region (2027-2032)
 - 12.1.2 Global Electronic Parking Brake(EPB) System Annual Revenue Forecast by Region (2027-2032)
- 12.2 Americas Forecast by Country (2027-2032)
- 12.3 APAC Forecast by Region (2027-2032)
- 12.4 Europe Forecast by Country (2027-2032)
- 12.5 Middle East & Africa Forecast by Country (2027-2032)
- 12.6 Global Electronic Parking Brake(EPB) System Forecast by Type (2027-2032)
- 12.7 Global Electronic Parking Brake(EPB) System Forecast by Application (2027-2032)

13 KEY PLAYERS ANALYSIS

- 13.1 ZF Group
 - 13.1.1 ZF Group Company Information
 - 13.1.2 ZF Group Electronic Parking Brake(EPB) System Product Portfolios and Specifications
 - 13.1.3 ZF Group Electronic Parking Brake(EPB) System Sales, Revenue, Price and Gross Margin (2021-2026)
 - 13.1.4 ZF Group Main Business Overview
 - 13.1.5 ZF Group Latest Developments
- 13.2 Aisin Seiki
 - 13.2.1 Aisin Seiki Company Information

13.2.2 Aisin Seiki Electronic Parking Brake(EPB) System Product Portfolios and Specifications

13.2.3 Aisin Seiki Electronic Parking Brake(EPB) System Sales, Revenue, Price and Gross Margin (2021-2026)

13.2.4 Aisin Seiki Main Business Overview

13.2.5 Aisin Seiki Latest Developments

13.3 Bosch

13.3.1 Bosch Company Information

13.3.2 Bosch Electronic Parking Brake(EPB) System Product Portfolios and Specifications

13.3.3 Bosch Electronic Parking Brake(EPB) System Sales, Revenue, Price and Gross Margin (2021-2026)

13.3.4 Bosch Main Business Overview

13.3.5 Bosch Latest Developments

13.4 Hyundai Mobis

13.4.1 Hyundai Mobis Company Information

13.4.2 Hyundai Mobis Electronic Parking Brake(EPB) System Product Portfolios and Specifications

13.4.3 Hyundai Mobis Electronic Parking Brake(EPB) System Sales, Revenue, Price and Gross Margin (2021-2026)

13.4.4 Hyundai Mobis Main Business Overview

13.4.5 Hyundai Mobis Latest Developments

13.5 Hitachi

13.5.1 Hitachi Company Information

13.5.2 Hitachi Electronic Parking Brake(EPB) System Product Portfolios and Specifications

13.5.3 Hitachi Electronic Parking Brake(EPB) System Sales, Revenue, Price and Gross Margin (2021-2026)

13.5.4 Hitachi Main Business Overview

13.5.5 Hitachi Latest Developments

13.6 TE Connectivity

13.6.1 TE Connectivity Company Information

13.6.2 TE Connectivity Electronic Parking Brake(EPB) System Product Portfolios and Specifications

13.6.3 TE Connectivity Electronic Parking Brake(EPB) System Sales, Revenue, Price and Gross Margin (2021-2026)

13.6.4 TE Connectivity Main Business Overview

13.6.5 TE Connectivity Latest Developments

13.7 K?ster

- 13.7.1 K?ster Company Information
- 13.7.2 K?ster Electronic Parking Brake(EPB) System Product Portfolios and Specifications
- 13.7.3 K?ster Electronic Parking Brake(EPB) System Sales, Revenue, Price and Gross Margin (2021-2026)
- 13.7.4 K?ster Main Business Overview
- 13.7.5 K?ster Latest Developments
- 13.8 Murata Manufacturing
 - 13.8.1 Murata Manufacturing Company Information
