The global Electronic Product Evaluation Service market size is predicted to grow from US\$ 1187 million in 2025 to US\$ 1732 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

To address the information asymmetry, difficulty in purchasing decisions, and discrepancies between manufacturer claims and actual user experience faced by consumers when dealing with a vast array of electronic products, electronic product review services have emerged. From the late 20th century to the early 21st century, with the popularization of the internet and the booming development of the consumer electronics industry, driven by professional media and user communities, the field of product information evaluation gradually became systematized and popularized. Currently, electronic product review services have developed into a multi-faceted system encompassing in-depth text and image reviews, video reviews, live unboxing, data testing, multi-product comparisons, and long-term experience reports. These services are widely applied to smartphones, computer hardware, audio-visual equipment, smart home devices, and wearable devices, aiming to provide consumers with purchasing decision support, reduce trial-and-error costs, and promote transparency and quality improvement in the industry through independent, objective, and multi-dimensional analysis.

Electronic product review services are transforming from ?single-parameter verification? to ?full lifecycle management,? becoming a crucial link in ensuring product quality, enhancing user experience, and driving technological innovation. Future development requires overcoming technological barriers, strengthening standardization, and building ecological collaboration to meet market changes and evolving user needs.
