The global Electronic Smoke Eaters market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Electronic (also referred to as Electrostatic) Smoke Eaters are very efficient at capturing airborne smoke and odors. The electrostatic precipitator, or electronic cell, is a metal filter that has two stages. The first stage is the ionizing section where particles are given an electrostatic charge. The particles then move through to the collection area where they adhere to aluminum plates (fins) and stay there until they're washed away during regular maintenance. Electronic Smoke Eater cells are capable of trapping over 97% of airborne contaminants every time the air passes through them.
