The sound generator is composed of magnets, coils, and speaker diaphragms. The sound generator converts the current frequency into sound. According to the principle of physics, when an electric current is passed through a coil to generate an electromagnetic field, the direction of the magnetic field is the right-hand rule. Suppose, the speaker plays the key of C, its frequency is 256Hz, that is, vibrates 256 times per second, the sound generator outputs alternating current of 256Hz, and the current changes 256 times per second, which emits C. When the electric coil vibrates with the sound generator film, it pushes the surrounding The air vibrates and the sound generator produces sound.
