Electronic spirometer is a medical device used to measure lung function. It is a type of pulmonary function test (PFT) that measures the amount and speed of air that a person can inhale and exhale. The electronic spirometer is designed to measure both the volume and flow of air in and out of the lungs, and it provides an objective measure of lung function. Electronic spirometry is commonly used to diagnose and monitor lung diseases such as asthma, chronic obstructive pulmonary disease (COPD), and cystic fibrosis. It is also used to evaluate the effects of medication and other treatments on lung function, and to assess the severity of lung disease. Electronic spirometers are preferred over traditional spirometers, as they offer greater accuracy, reproducibility, and ease of use. They are widely available in hospitals, clinics, and can be used by healthcare professionals or trained patients at home.

The key manufacturers of Electronic Spirometer include Vyair Medical, Schiller, CHEST. MI., MIR, Vitalograph, etc. The top five players each have a market share of more than 1%, accounting for about 14% of the global market in total.

The main markets are North America, Europe, China and other Asia-Pacific countries. North America accounts for about 35% of the market, making it the world's largest market. It was followed by Europe, with about 28%.

Electronic spirometer is mainly divided into desktop spirometer and portable spirometer, of which desktop accounts for more than 80%. The products are mainly used in hospital and homecare, of which the hospital part accounts for about 87%, and it is expected to continue maintaining a high proportion in the future.
