An electronic syringe pump is a medical device used to control and manage the injection rate and volume of drugs, nutritional solutions, or other liquids. These devices are commonly used in hospitals, emergency vehicles and home healthcare settings to ensure patients receive the medication or nutritional support they need accurately and safely. Electronic syringe pumps can deliver drugs to patients according to a doctor's prescription or settings set by a medical staff by precisely controlling the injection rate and volume. This precise control is critical for patients who require continuous infusion for long periods of time, such as seriously ill patients who require continuous infusion therapy, patients recovering from surgery, or patients who require long-term nutritional support.
