Electronic veterinary sphygmomanometers usually refer to blood pressure measuring instruments specially designed for pets and are used to measure the blood pressure of animals (such as dogs, cats, etc.). These blood pressure monitors typically differ from those used in humans because animals have different anatomy and physiology than humans, requiring special design.

The electronic veterinary sphygmomanometer is adjusted according to the animal's size, posture and physiological characteristics. It needs to use a special measurement method and be equipped with special software or algorithm to interpret the blood

pressure data. It takes into account the safety and comfort of the animal and avoids causing problems to the animal. Excessive stress or discomfort. Electronic veterinary sphygmomanometers play an important role in veterinary diagnosis and treatment. They can help veterinarians promptly detect and monitor blood pressure abnormalities in animals and guide corresponding treatment and care plans.
