The global Electronically Controlled Permanent Magnet Chuck market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Electronically controlled permanent magnet chucks, a hybrid of the permanent and electromagnetic type. This device locks the part with a jolt of electricity and then uses another jolt of electricity to unlock it. If there is a power outage while working a part, the chuck continues to hold tightly. Each magnet has an electrical coil around it that can reverse the polarity of the magnet extremely quickly. Another function of the coil is to control the amount of magnetic pull the magnetic chuck exerts.
