The global Electronically Scanned Array System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

An Electronically Scanned Array (ESA) system is a technology used in radar and communication systems. Unlike traditional mechanical radar systems that use a rotating antenna to scan the environment, ESA systems use a fixed array of antennas and electronically control the direction of the radar beam. This technology provides several advantages, including faster and more agile beam steering, improved target tracking, and reduced mechanical complexity.

Military and Defense: The defense sector is a major market for ESA systems. Modern military platforms, such as fighter aircraft, naval vessels, and ground-based air defense systems, increasingly rely on ESA radar technology for improved situational awareness, target detection, and tracking capabilities.

Aerospace: Commercial and private aerospace industries use ESA technology for applications like weather radar on aircraft, which provides more accurate and timely information to pilots, enhancing safety and efficiency.

Automotive Radar: The automotive industry is embracing ESA systems for advanced driver-assistance systems (ADAS) and autonomous vehicles. ESA radar provides higher-resolution data for improved object detection, collision avoidance, and adaptive cruise control.
