## Abstracts

The global Electronically Steerable Flat Panel Satellite Antenna market size is predicted to grow from US\$ 410 million in 2025 to US\$ 4170 million in 2032; it is expected to grow at a CAGR of 40.0% from 2026 to 2032.

Flat Panel Satellite Antenna is composed of many radiating elements that can be thought of as numerous, tiny, fixed antennas. Each one has a phase shifter which forms beams by shifting the phase of the signal emitted from each of the radiating elements (tiny antennas). This provides a constructive/destructive interference which may be used to steer the beam(s) in a particular direction. An Electronically Steerable Antenna or ESA is an electronically-controlled array of antenna elements that can be electronically steered to point in different directions without moving the antenna itself. Electronically steered antennas can solve the drifting issue without the need for large mechanically controlled dishes moving back and forth. These flat-panel antennas make non-stationary satellite tracking easy by allowing them to move seamlessly from one satellite to another.
