In the traditional electronics manufacturing industry, manufacturers complete the links from product development and design, raw material procurement to product manufacturing, and use their own brand for product sales. With the continuous development of the market and the increase of fierce market competition, manufacturers have gradually increased the production, development, and design of products in order to achieve the purpose of expanding market share, effectively reducing production costs, rapidly expanding product capacity, and shortening new product development time. Outsourcing is done to other companies, and the focus of its development has gradually shifted to brand management and channel construction. As a result, the electronics manufacturing industry has experienced a professional division of labor between brand owners and electronics manufacturing outsourcing service providers.
