According to our LPI (LP Information) latest study, the global Electronics Recycling market size was valued at US$ 20030 million in 2023. With growing demand in downstream market, the Electronics Recycling is forecast to a readjusted size of US$ 34600 million by 2030 with a CAGR of 8.1% during review period.

The research report highlights the growth potential of the global Electronics Recycling market. Electronics Recycling are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Electronics Recycling. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Electronics Recycling market.

Electronic recycling helps to recover precious metals by ensuring that toxic and hazardous substance are handled properly thereby minimizing the environmental impact associated with mining.

Geographically, Europe dominated the e-waste recycling market followed by North America in 2017. The European recycling rate is slightly higher than North America due to efficient approach to recycling guided by two directives; RoHS Restriction of Hazardous Substances Directive and the Waste Electrical and Electronic Equipment (WEEE). Most of the e-waste from developed countries was imported to developing countries such as India, China and Pakistan due to cheap labor and no mandatory recycling regulations. In addition, the amount of e-waste in South Africa is expected to

increase eight times in near future. This is because South Africa is extensively serving as dumping ground for e-waste.
