The global Electrophoretic Coating Production Line market size is predicted to grow from US\$ 2843 million in 2025 to US\$ 4726 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

In the electrophoretic coating production line, the object to be coated is immersed in water-soluble paint as an anode (anodic electrophoresis), and a corresponding cathode is set up. Direct current is passed between the two poles, and the physical and chemical effects generated by the current make the paint evenly coated. A coating technology on the object to be coated; electrophoretic coating must use electrophoretic paint. Electrophoretic paint is usually also called water-soluble paint. Electrophoretic paint and distilled water must be diluted in a certain ratio before it can be used.

The electrophoretic coating production line market has shown a steady growth trend in recent years, and this trend is expected to continue to strengthen in the next few years. As an advanced coating technology that deposits charged coating particles evenly on the metal surface through electric field force, electrophoretic coating has become the preferred coating process in the fields of automobiles, home appliances, industrial equipment, etc. due to its excellent coating quality, high material utilization rate and outstanding environmental protection characteristics. At present, the global electrophoretic coating production line market has formed a relatively mature industrial structure, but technological innovation and application expansion are still constantly pushing the market boundaries to expand outward.
