The global Electrophysiology Therapeutic Devices market size is predicted to grow from US\$ 5325 million in 2025 to US\$ 7928 million in 2032; it is expected to grow at a CAGR of 6.6% from 2026 to 2032.

Electrophysiology (EP) therapeutic devices are medical instruments designed to treat abnormal electrical activity in the heart and nervous system. These devices include catheter ablation systems, implantable cardiac pacemakers, implantable cardioverter defibrillators (ICDs), and neuromodulation devices. EP therapeutic devices work by delivering targeted electrical energy to restore normal heart rhythm or modulate nerve signals, providing effective treatment for arrhythmias, conduction disorders, epilepsy, chronic pain, and other neurological or cardiac conditions. Modern devices often integrate real-time mapping, feedback systems, and minimally invasive technologies to enhance procedural precision and patient safety. In 2025, global Electrophysiology Therapeutic Devices production reached approximately 28.5 k units, with an average global market price of around 191 k USD/unit. The production capacity for Electrophysiology Therapeutic Devices in 2025 was approximately 30 k units. The typical gross profit margin for Electrophysiology Therapeutic Devices between 20% and 40%.

The global electrophysiology therapeutic devices market is witnessing strong growth due to the increasing prevalence of cardiac arrhythmias, neurological disorders, and chronic pain conditions. Rising adoption of minimally invasive procedures, technological advancements in ablation systems, implantable pacemakers, and neuromodulation devices, and expanding healthcare infrastructure in emerging markets are driving demand. North America and Europe dominate the market due to advanced healthcare systems, high patient awareness, and reimbursement support, while Asia-Pacific is

expected to grow rapidly as hospitals invest in EP therapy capabilities and the patient population with cardiovascular and neurological disorders rises.
