The global Electroplated CBN Saw Blades market size is predicted to grow from US$ 232 million in 2025 to US$ 352 million in 2032; it is expected to grow at a CAGR of 6.2% from 2026 to 2032.

Electroplated CBN saw blades are superhard abrasive tools manufactured through an electroplating (electrodeposition) process that firmly attaches a single layer of cubic boron nitride (CBN) abrasive grains to the cutting edge of a steel substrate. Demand stems from industries requiring precise, efficient, and clean cutting of high-hardness, high-wear-resistant materials, primarily including aerospace (high-temperature alloy components), automotive manufacturing (hardened gears, drive shafts), and mold making (heat-treated mold steel). These industries' demands for processing quality, efficiency, and reduced material loss drive the need for specialized high-performance electroplated CBN saw blades. The core of the upstream supply chain for electroplated CBN saw blades lies in the synthesis and micronization of cubic boron nitride (CBN) superhard abrasives and synthetic diamond (used for processing CBN). The downstream supply chain is widely used in cutting processes in high-end manufacturing, integrating them as tools into CNC cutting machines, precision cutting equipment, or robotic automated production lines. In 2024, the production of electroplated CBN saw blades was approximately 1.5 million pieces, with an average selling price of approximately US$150 per piece, a gross profit margin of approximately 35%, and a single production line capacity of approximately 30,000 pieces per year.

United States market for Electroplated CBN Saw Blades is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
