Electroplating Anti-Rust Oil is a functional oil product specifically developed for metal products after electroplating. It is scientifically formulated by blending various special additives with base oil. The additives include rust preventives, film-formers, and viscosity enhancers. The rust preventives can adsorb onto the metal surface, altering the charge distribution and inhibiting corrosion reactions. The film-formers facilitate the formation of a dense, continuous, and highly adhesive protective film on the metal surface, effectively blocking the contact of moisture, oxygen, and corrosive substances with the metal. The viscosity enhancers increase the viscosity of the oil to ensure the stability of the protective film. When applied to electroplated parts, it can prevent rusting during storage, transportation, and subsequent processing due to environmental factors, safeguarding the quality of the electroplated layer and the overall performance and service life of the metal products.
