This report mainly focus on electropolishing services market. Electropolishing also known as electro-chemical or electrolytic polishing is a process of removing metal from a work piece by the passage of electric current while the work is submerged in a specially designed electrolyte. The process is essentially the reverse of electroplating. In a plating system, metal ions are deposited from the solution onto the work piece; in an electropolishing system, the work piece itself is dissolved, adding metal ions to the solution.
