The global Electrostatic Discharge Foam Packaging market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Many electronic parts and components used in high-tech products may be damaged or degraded due to the sudden replacement of electrostatic charges. This electrostatic discharge is a must for the industry handling sensitive electronic components. Using Electrostatic Discharge Foam Packaging products can prevent electronic parts or components from generating electrostatic fields.

When two objects have different static charge levels, ie a positive charge and a negative charge, they will tend to reach equilibrium. If the items are close enough, there may be rapid spontaneous electrostatic charge transfer between each other. This is electrostatic discharge.
