Electrostatic Dissipative Film is a thin plastic sheet that can be applied to the surface of electronic components (i.e. printed circuit boards (PCBs)) or used as a secondary packaging material. The film provides electrical protection and plays an important role in preventing electric shock. ESD, which stands for Electrostatic Discharge, is the phenomenon in which electrical current builds up on the human body or insulating surfaces and causes a destructive discharge. This phenomenon can damage circuits, especially those of electronic products such as PCs and mobile devices.

The global market for Electrostatic Dissipative Film is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.
