The global Electrostatic Fabric Integrated Precipitator (EFIP) market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Electrostatic Fabric Integrated Precipitator (EFIP) is an advanced air pollution control device that integrates electrostatic precipitation and fabric filtration into a single unit. In this system, particulate-laden gas first passes through an electrostatic section, where particles are electrically charged and collected on electrode plates. The partially cleaned gas then flows through a fabric filter section, where remaining fine particles are captured on filter bags. This integrated design maximizes particle removal efficiency, reduces overall system pressure drop, and extends the life of the fabric filters by reducing dust load. The EFIP is particularly effective in industrial applications requiring high-efficiency dust removal and low emissions.
