The global Electrostatic Kitchen Filter market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The electrostatic kitchen filter charges oil fume particles through a high-voltage electrostatic field, and then these charged particles are captured by a dust collector to achieve the purpose of air purification. When the oil fume exhaust gas passes through a high-voltage electric field, the oil fume particles are charged in a very short time due to collision and capture of gas ions, and move towards the positive electrode dust collection plate under the force of the electric field, thus achieving the separation effect of oil fume and air.
