The global Electrostatic Lens market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Electrostatic lens is a type of electron lens. It is a device that focuses and images the electron beam by using the electrostatic field generated by a charged conductor. It consists of a lens system composed of multiple electrostatic lenses. Its main function is to send most of the ions in the ionization chamber to the mass analyzer at a very small divergence angle. Electrostatic lens is generally composed of two or more rotationally symmetrical cylindrical electrodes or metal diaphragm electrodes with small holes. A certain DC voltage is applied to these electrodes to form a rotationally symmetrical electrostatic field. Electrostatic lenses are widely used in electronic devices (such as cathode ray oscilloscopes) and electron microscopes. Electrostatic lenses also maintain a certain application in systems such as electron beam micromatrix exposure and new electronic display screens.

United States market for Electrostatic Lens is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Electrostatic Lens is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
