The global Electrostatic Oil Cleaner (EOC) market size is predicted to grow from US\$ 256 million in 2025 to US\$ 338 million in 2031; it is expected to grow at a CAGR of 4.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Electrostatic Oil Cleaner (EOC) is able to remove all of the oil-insoluble particles, whether they are made of metal, non-metal, organic, or inorganic materials. In particular, it removes oil oxidation products, primary culprits for causing malfunction of hydraulic systems. Also it is the only device capable of removing oil oxidation products that are difficult for filters to remove. EOCs are dedicated oil cleaning systems designed for installation on hydraulic and lubricating equipment. Through a kidney-loop process, the EOC draws oil from a main reservoir and circulates it at a low velocity.

Electrostatic Oil Cleaner (EOC) is a technology used for removing contaminants from oils and other hydraulic fluids. The global EOC market is primarily driven by a combination of the following factors: Increasing demand for high-performance oils: As industries such as automotive, aerospace, and heavy machinery continue to evolve, there is a growing demand for high-performance oils that can withstand extreme temperatures, high pressures, and harsh environmental conditions. Electrostatic Oil Cleaners help to maintain the performance of such oils by removing contaminants that could compromise their effectiveness. Growing focus on equipment maintenance: Proper maintenance of machinery and equipment is critical to their longevity and optimal performance. Electrostatic Oil Cleaners help in maintaining the condition of

hydraulic fluids and oils, which is becoming increasingly important for industries that rely on heavy machinery and equipment. Advancements in technology: Technological advancements in the design and functioning of Electrostatic Oil Cleaners have increased their efficiency and effectiveness, with improved removal rates and reduced energy consumption. This has made the technology more appealing to various industries, driving the demand for EOCs. Increasing adoption of reusable products: The growing trend towards sustainability and the reduction of waste has also increased the demand for Electrostatic Oil Cleaners, which are reusable and more environmentally friendly than other methods of oil filtration. Emerging economies and industrialization: As emerging economies continue to grow and invest in new manufacturing processes and technologies, the demand for Electrostatic Oil Cleaners is expected to increase, particularly in Asia-Pacific and South America.
