The global Electrostatic Oiling Device market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Oil is applied on the surface of strips of steel and aluminium by electrostatic spraying against corrosion or as lubricant for the next processing steps. At room temperature, the oil can be liquid or solid (drylube / hotmelt process).

The electrostatic oiling device market is witnessing significant growth due to several trends and factors. Electrostatic oiling devices utilize the principles of electrostatics to apply oil or lubricants to surfaces with a high level of precision and efficiency. The demand for these devices is growing as industries recognize the advantages of electrostatic technology, such as reduced overspray, improved coating efficiency, and minimized waste. Ongoing advancements in electrostatic technology are driving the market growth. Manufacturers are constantly improving the performance and capabilities of electrostatic oiling devices, resulting in higher voltage and more precise control over the oiling process. This leads to enhanced coating quality, reduced downtime, and increased productivity. The electrostatic oiling device market is experiencing growth due to increasing adoption of electrostatic technology, advancements in the field, the demand for efficient lubrication, application across various industries, focus on sustainability and waste reduction, and integration with Industry 4.0 and automation.
