The global Electrostatic Precipitator market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

An electrostatic precipitator (ESP) is a highly efficient pollution control device used to remove fine particles, such as dust and smoke, from industrial exhaust gases. It works by creating an electrostatic charge to attract and capture these particles onto charged plates or electrodes. The collected particles are then periodically removed from the plates for disposal. ESPs are commonly used in power plants, cement factories, steel mills, and other industries to reduce air pollution and maintain cleaner air quality.
