Elemental impurity analysis refers to the process of determining the presence and concentration of specific elemental impurities in a sample. Elemental impurities are trace elements or metals that may be present in materials or products at very low levels. These impurities can have various sources, including raw materials, processing equipment, and the manufacturing environment.

Continuous advancements in analytical techniques, particularly inductively coupled plasma mass spectrometry (ICP-MS) and inductively coupled plasma optical emission spectrometry (ICP-OES), have been prominent. These techniques offer improved sensitivity, precision, and the ability to detect a wide range of elemental impurities.
