The global Elevator Bolts market size is predicted to grow from US\$ 2004 million in 2025 to US\$ 2482 million in 2031; it is expected to grow at a CAGR of 3.6% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Elevator bolts are specialized bolts, primarily used in the construction of elevator systems, but they can also be used in other applications where a strong and secure fastener is required. They are specifically designed to provide a secure connection between two or more components in an elevator assembly.

Elevator bolts have a large, flat, and circular head that is typically round or oval-shaped. The head of the bolt usually has a shallow, wide surface that distributes the load and prevents it from sinking into the material. This design allows for a flush or recessed installation, providing a smooth surface and reducing the risk of injury. The shank of an elevator bolt is usually smooth and cylindrical, without threads. It is inserted into a pre-drilled hole in the material and secured with a nut on the opposite side, forming a tight and secure connection. The nut is often square or hexagonal to ensure proper gripping and tightening. Elevator bolts are commonly made of steel, providing strength and durability for long-lasting performance. They are available in various sizes, lengths, and finishes to suit different applications and environments.
