The electric two-wheeler ban elevator control system is an intelligent safety management system designed to prevent electric vehicles from entering elevators, thereby reducing safety risks such as fires caused by electric vehicle batteries. The system usually identifies electric vehicles through image recognition, infrared detection or weight sensing technologies. When an electric vehicle is detected entering the elevator, an alarm will be triggered to prevent the elevator from operating normally or issue a reminder message. If necessary, the property management system can be linked to intervene. This system improves the safety of public places and helps reduce safety hazards caused by electric vehicles.
