According to this study, the global Elevator Emergency Response Platform market size will reach US\$ 1190 million by 2031.

The elevator emergency response service system is an intelligent management platform that integrates monitoring, alarm, linkage response and disposal. It is mainly used to realize rapid alarm, remote call, information reporting and emergency rescue in emergency situations such as elevator failure or passenger entrapment. The system usually includes elevator monitoring equipment, emergency communication terminals, data transmission networks and emergency response centers, which can greatly improve the efficiency of elevator failure response and the level of passenger safety.

With the development of smart city construction and Internet of Things technology, the elevator emergency response service system is evolving towards digitalization, intelligence and platformization. Future trends include full access to 5G communications, AI fault prediction, data visualization management, and deep integration with the city emergency management platform, realizing the transformation from 'passive emergency' to 'active prevention', and promoting elevator safety management to a more efficient and intelligent direction.

According to data released by the National Bureau of Statistics, China's elevator production in 2022 was 1.455 million units, which was down 5.8% compared to last year. After years of development, China has become the world's largest elevator producer and consumer. More than 70% of the world's elevator manufacturing business were in Chinese mainland, and 60%-65% of the world's elevators sold in the Chinese market. According to data from the China Elevator Association, by the end of 2022, the number of elevators registered in operation in China has reached 9.65 million, and more

than 15,000 elevators have been installed after acceptance.
