The elevator drop buffer is a safety device used in elevator systems to prevent serious damage to passengers and elevator equipment when the elevator falls or suddenly slides down. It absorbs the impact energy during the elevator fall, slows down the elevator's descent speed, and ensures that the elevator can stop safely in extreme situations. The elevator drop buffer is usually installed at the bottom of the elevator shaft or the bottom of the elevator car as an emergency brake device.

The working principle of the elevator drop buffer is to use its internal elastic material, hydraulic system or mechanical structure to absorb the kinetic energy of the elevator when it falls. When an abnormal situation occurs in the elevator, the buffer will be quickly activated to slow down the elevator's descent speed and eventually stop safely, avoiding direct collision between the elevator and the bottom of the shaft and reducing damage to personnel and equipment.

United States market for Elevator Fall Buffer is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Elevator Fall Buffer is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
