Elevator Overload Lifting Load Sensor is a safety device designed to detect and monitor the weight of passengers or cargo inside an elevator to ensure it does not exceed the system's maximum load capacity. Installed in key load-bearing components such as the elevator car floor, suspension cables, or support beams, the sensor continuously measures the lifting load and triggers an alert or prevents operation if an overload condition is detected. This helps protect the elevator’s mechanical systems, enhances passenger safety, and ensures compliance with safety standards and regulations.
