The global Elevator Safety Monitoring System market size is predicted to grow from US\$ 738 million in 2025 to US\$ 1276 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

The elevator safety monitoring system is a digital system designed for regulatory authorities, property management companies, and maintenance enterprises. It utilizes the Internet of Things (IoT), big data, video/voice communication, and emergency response mechanisms to monitor and manage the entire lifecycle of elevator operations online and in a unified manner. Typically, it collects data from elevator control cabinets, car/shaft status, entrapment alarms, remote video/voice intercoms, maintenance records, and annual inspection information. This enables real-time monitoring of elevator operations within a city or industrial park, abnormal warnings, automatic dispatching of entrapment incidents, and emergency response scheduling. It also creates traceable safety files and risk maps. Furthermore, it integrates with the 12345 hotline, emergency centers, maintenance units, and property management platforms, making the entire process of 'anomaly detection—early warning push—dispatch and handling—feedback closed loop' online and transparent. This helps reduce accident rates and regulatory costs, upgrading the previously fragmented, reactive elevator safety management into a real-time, proactive, and fully traceable intelligent monitoring model.
