The global Elevator Smart Safety Supervision Platform market size is predicted to grow from US\$ 738 million in 2025 to US\$ 1276 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

The elevator intelligent safety supervision platform is a digital system designed for regulatory departments, property management companies, and maintenance enterprises. It utilizes the Internet of Things (IoT), big data, video/voice communication, and emergency response coordination to monitor and manage the entire lifecycle of elevator operations online. Typically, it collects data from elevator control cabinets, car/shaft status, entrapment alarms, remote video/voice intercoms, maintenance records, and annual inspection information. This enables real-time monitoring of elevator operations within a city or industrial park, abnormal warnings, automatic dispatching of entrapment incidents, and emergency response scheduling. It also generates traceable safety files and risk maps. Furthermore, it integrates with the 12345 hotline, emergency centers, maintenance units, and property management platforms, making the entire process of 'anomaly detection—early warning push—dispatch and handling—feedback closed loop' online and transparent. This helps reduce accident rates and regulatory costs, upgrading the previously fragmented, reactive elevator safety management to a real-time, proactive, and fully traceable intelligent supervision model.
