The global Ellipsometry market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Ellipsometry is an optical technique used to study the dielectric properties (complex refractive index or dielectric function) of thin films. Ellipsometer is used to measure the polarization change of reflection or transmission and compare it with the model. Ellipsometry can be used to characterize the composition, roughness, thickness (depth) , crystalline properties, doping concentration, conductivity and other material characteristics. It is very sensitive to the variation of the optical response of the incident radiation interacting with the material under study.

United States market for Ellipsometry is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Ellipsometry is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
