An embedded hardware security module (HSM) is a dedicated cryptographic processing hardware integrated into a device. It is used to perform core security operations such as encryption, decryption, digital signatures, key generation and storage. It has features such as anti-tampering and anti-physical attack. It is widely embedded in embedded systems such as automotive ECUs, industrial control terminals, smart meters, payment terminals and communication equipment to ensure data integrity, device authentication and key communication security. Compared with traditional external HSMs, it is more suitable for edge and space-constrained scenarios. The embedded HSM market size is expected to be approximately US$187 million in 2024. Driven by the growth of the Internet of Vehicles, Industrial Internet of Things, 5G communication terminals and a new generation of smart devices, the market's compound annual growth rate is expected to exceed 11%.

United States market for Embedded Hardware Security Module (HSM) is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
