The global Embedded Radio Modem market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Wireless data transmission radio modem, as a communication medium, has a certain range of applications, such as fiber optic, microwave, bare wire, etc. Its most basic function is to achieve data transmission and transparent data transmission without changing the original communication program and connection method. Specific indicators include transmission distance, transmission and reception frequency, etc. The transmission distance of digital radio stations ranges from several hundred meters to several tens of kilometers. The communication frequency is generally 228~323MHz. Under certain special conditions, real-time and reliable monitoring signal data transmission can be provided in a dedicated network. It has the characteristics of low cost, convenient installation and maintenance, strong diffraction ability, flexible network structure, and wide coverage. Suitable for multi-point and sporadic occasions, it can be connected to data terminals in complex geographical environments such as PLC, RTU, rain gauge, liquid level gauge, etc.

United States market for Embedded Radio Modem is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
