A forklift camera is a type of camera system designed specifically for use on forklifts and other types of industrial equipment. It typically consists of one or more cameras mounted on the forklift in strategic locations to provide the operator with a clear view of the surrounding area. Forklift cameras are used to improve safety and visibility, allowing operators to see obstacles, people, or other hazards that may be in their path. Some forklift cameras also come with additional features such as night vision or the ability to record footage for later review.

Forklift cameras can be divided into traditional image acquisition cameras and embedded vision cameras. Embedded vision cameras are becoming more and more popular. To meet the growing demand for high-speed connections, a variety of flexible and powerful 3D camera interfaces are available on the market.
