An Emergency Beacon Management Device is a device or system designed to facilitate the monitoring, control, and management of emergency beacons. Emergency beacons, also known as distress beacons or locator beacons, are devices that transmit distress signals in emergency situations to request assistance and indicate the location of the distress. These beacons are commonly used in various scenarios, including aviation, maritime, and outdoor activities, to enhance safety and emergency response.

EBMDs are increasingly designed to work seamlessly with satellite communication systems, ensuring distress signals can be transmitted even in remote or isolated areas with limited terrestrial network coverage.
