The global Emergency Contraceptive Pills market size is predicted to grow from US\$ 550 million in 2025 to US\$ 665 million in 2031; it is expected to grow at a CAGR of 3.2% from 2025 to 2031.

The prevention of pregnancy after unprotected vaginal intercourse. Emergency contraception may use drugs related to the female hormones estragon and progesterone. These 'morning-after pill' are similar to birth control pills but generally contain higher hormone doses.

The emergency contraceptive pills (ECPs) market is primarily driven by increasing awareness about contraceptive options and the growing demand for effective methods of preventing unintended pregnancies. As access to healthcare information improves and discussions about reproductive health become more open, more women are opting for emergency contraception as a backup method. In addition, government initiatives and non-profit campaigns aimed at family planning and reproductive rights have contributed to the increased availability and use of ECPs, further driving market growth.

However, the market faces significant challenges. One major issue is the ongoing social stigma and misinformation surrounding the use of emergency contraceptives, which can deter women from seeking these products. Additionally, access to ECPs remains limited in certain regions due to restrictive regulations or cultural opposition, particularly in more conservative areas. Price sensitivity in developing countries can also be a barrier, as not all women can afford the cost of these pills, limiting their widespread adoption.

The major players in global Emergency Contraceptive Pills market include Foundation Consumer Healthcare, Gedeon Richter, Zizhu Pharma, etc. The top 3 players occupy about 55% shares of the global market. Asia-Pacific and Europe are main markets, they occupy about 75% of the global market.
