In 2025, global Emergency Flood Light production reached approximately 11,170 k units?with an average global market price of around US\$ 55 per unit, and a gross profit margin of approximately 20%-40%. Emergency Flood Lights are high-intensity lighting devices designed to provide wide-area illumination during power outages, disasters, rescue operations, construction emergencies, industrial accidents, and outdoor security events. These products usually use LED light sources, rechargeable batteries, emergency power circuits, waterproof housings, handles, brackets, or tripod structures. They are widely used in fire rescue, disaster relief, road repair, industrial maintenance, warehouses, tunnels, mines, construction sites, parking areas, public facilities, and temporary emergency lighting. Compared with ordinary flood lights, emergency flood lights emphasize backup power, portability, fast deployment, durability, and stable illumination under harsh conditions. The industrial chain of Emergency Flood Lights includes upstream LED chips, drivers, lithium batteries, lead-acid batteries, charging circuits, aluminum housings, lenses, reflectors, waterproof seals, switches, cables, brackets, handles, sensors, and packaging materials. The midstream includes lighting design, optical structure development, battery management, emergency circuit integration, thermal management, waterproof testing, assembly, aging tests, quality control, and safety certification. Downstream applications include emergency rescue, industrial plants, construction sites, municipal maintenance, road repair, warehouses, commercial buildings, public facilities, outdoor events, and household backup lighting. Related services include installation guidance, product testing, maintenance, battery replacement, spare parts supply, warranty service, and after-sales support.
