## Abstracts

The global Emergency Medical Dispatch Software market size is predicted to grow from US\$ 109 million in 2025 to US\$ 176 million in 2032; it is expected to grow at a CAGR of 7.3% from 2026 to 2032.

Emergency Medical Dispatch (EMD) software is a specialized system designed to support emergency call centers (such as 911/112), EMS dispatch centers, and fire and medical departments. It achieves efficient and accurate emergency response by receiving incoming calls, identifying event types, providing standardized consultation processes, automatically classifying event severity, dispatching the nearest available ambulance or emergency medical resources, and tracking vehicle status in real time. Emergency dispatch is a complex and time-sensitive process, and manual judgment is prone to delays or errors. EMD software, through standardized processes, intelligent dispatching, and real-time information sharing, significantly improves response speed, reduces mis-dispatch, optimizes resource utilization, and enhances the overall efficiency and safety of the emergency medical system.

The development of emergency medical dispatch software is driven by multiple forces, but also faces practical constraints: On the one hand, urbanization and population growth have led to a continuous increase in emergency call volumes, and governments are increasing their investment in modernizing the 911/112 systems. Furthermore, the widespread adoption of technologies such as GIS, AI, and IoT is driving dispatch systems towards greater intelligence and precision. Strict regulatory requirements for response time and the trend towards full-chain digitalization of EMS are also promoting the deep integration of dispatch software with systems such as CAD and EPCR. On the other hand, high deployment and training costs, complex system integration, and significant data privacy concerns limit its widespread adoption. Dispatch work still

heavily relies on human judgment, and the lack of uniformity in regulations and dispatch protocols across countries further complicates system implementation. These drivers and constraints have collectively shaped the market landscape and development pace of EMD software.
