Abstracts

The global Emergency Medical Services Software market size is predicted to grow from US\$ 390 million in 2025 to US\$ 686 million in 2032; it is expected to grow at a CAGR of 8.8% from 2026 to 2032.

Emergency Medical Services (EMS) software refers to a comprehensive IT solution designed specifically for dispatch centers, ambulance teams, and hospital emergency departments. This software digitizes the entire process—from reporting and resource allocation to pre-hospital care, transport monitoring, and cost settlement—by integrating modules such as GPS positioning, real-time communication, electronic medical records (ePCR), and decision support. It is not merely a recording tool, but a highly reliable distributed collaborative platform. It solves the problem of 'information silos' in emergency care. It significantly shortens response time, eliminates errors from handwritten medical records, and enables real-time data sharing between pre-hospital emergency care and in-hospital resuscitation, providing precise data support for the golden time of rescue.

The EMS software market is transforming from a simple 'recording tool' to an 'AI-driven dynamic network.' Upstream demand is primarily driven by high-performance mobile hardware (rugged tablet parameters: IP68 waterproof and dustproof, high-brightness anti-glare screen) and 5G IoT modules (parameters: latency
