Emergency Cervical Collar is a medical device used to immobilize the neck, usually used in emergency situations, such as emergency treatment of cervical spine injury or neck pain caused by car accidents, falls, sports injuries, etc. An emergency cervical collar can be used to temporarily immobilize the neck to avoid further deterioration of cervical fractures or spinal cord injuries. Its function is to fix the cervical spine and reduce the activity of the cervical spine, thereby reducing neck pain and reducing the risk of cervical spine injury. Emergency neck collars are usually made of a soft material such as sponge or foam and have adjustable straps to ensure a suitable fit for necks of various sizes and shapes. When using an emergency cervical collar, ensure proper placement and adjustment to avoid discomfort or further injury to the patient.
