## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In industries such as mining, construction, and chemical manufacturing there is a higher potential for the atmosphere to become contaminated and unsafe. Fires, explosions, rock-falls, flooding and the release of toxic gases are just some of the types of incidents that occur all too often, despite planning and safety precautions.

Refuge chambers are sealed environments, built to sustain life during an emergency or hazardous situation. These safe havens provide a secure area with shelter, water, and breathable air, where personnel can remain until rescued or the hazard subsides.

More specifically, refuge chambers are closed circuit breathing apparatuses within a sealed container; where carbon dioxide and other toxins are removed, oxygen is added, and temperature and humidity are maintained, all while protecting occupants from the external threat.
