An emergency vent cover, also known as an emergency relief vent cover or pressure relief vent cover, is a safety device used in industrial settings to prevent over-pressurization of equipment or vessels. These covers are typically installed on tanks, storage vessels, or processing equipment that contain volatile or hazardous materials. In the event of a sudden increase in pressure within the vessel due to factors such as thermal expansion or chemical reactions, the emergency vent cover will automatically open to release excess pressure and prevent catastrophic failure of the vessel.

The global Emergency Vent Cover market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
