The global EMI Conductive Film market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

EMI conductive film is a material used for electromagnetic interference shielding. It can bond conductive particles or metal mesh to a flexible or rigid substrate through conductive glue or conductive adhesive to form a film with a certain thickness and conductivity. EMI conductive film can be used for grounding and shielding of electronic equipment such as display modules, camera modules, connectors, ventilation panels, etc. to improve signal integrity and reduce electromagnetic interference. The advantage of EMI conductive film is that it can save space and cost, support late addition of design, and eliminate the need to redesign the electrical system.
