According to our LPI (LP Information) latest study, the global eMMC Memory Chip market size was valued at US\$ 6212.9 million in 2023. With growing demand in downstream market, the eMMC Memory Chip is forecast to a readjusted size of US\$ 9876.8 million by 2030 with a CAGR of 6.8% during review period.

The research report highlights the growth potential of the global eMMC Memory Chip market. eMMC Memory Chip are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of eMMC Memory Chip. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the eMMC Memory Chip market.

eMMC storage belongs to embedded storage. Embedded storage usually refers to semiconductor memory embedded in the main system of electronic products and has an embedded interface. According to the terminal application scenario, it can be divided into industrial-grade and automotive-grade eMMC memory chips. Its capacity range is usually 4G-256G, and it can achieve wide temperature range operation as low as -40° and as high as +105°. Terminals are mainly used in smartphones, smart TVs, automotive electronics and other fields.

The global market for semiconductor was estimated at US\$ 579 billion in the year 2022, is projected to US\$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and

microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices.
