Employee Intranet Software is a type of software that provides a restricted and private communications network hosted online. Each intranet is typically accessible by a specific group of people, such as the members of a team or company. Employee intranets exist to provide staff with a centralized location to work together, share media, communicate, train, provide and receive feedback, or otherwise collaborate on a variety of tasks. Employee intranet solutions allow companies to cherry-pick or bundle features from other types of software like internal communications software or business content management software. If the intranet doesn't provide a feature natively, it will often integrate with common or frequently used software solutions and enable users to access it from inside the intranet portal.

The industry trend of Employee Intranet Software is driven by the rapid digitization of the workplace and the emergence of powerful platforms and disruptors that offer integrated solutions for communication, collaboration, and productivity. According to Gartner research, employee intranets are evolving from information-centric to employee-centric platforms that focus on creating a personalized, engaging, and seamless digital employee experience. Moreover, the COVID-19 pandemic has accelerated the shift to remote and hybrid work models across various industries, creating new challenges and opportunities for employee intranets to connect and empower distributed teams. These trends create new demands and expectations for employee intranet software providers to differentiate their offerings and capture value from customers.
