Enamel coated steel plate, also known as enamel coated steel plate, is a material made by using zero carbon steel plate as the substrate, processed through electrostatic dry wet process, and fired with inorganic non-metallic materials at a high temperature of over 850 °C. Enamel steel plate is a composite material formed by combining high-quality steel plate and special functional inorganic non-metallic material through a new electrostatic dry powder coating process and high-temperature firing, which creates a strong chemical bond between the high-quality steel plate and special functional inorganic coating. Enamel steel plates can be used for decorative wall panels in subway stations, building interiors, team roads, sterile operating room walls, pedestrian underground tunnel walls, street community signs, enamel wall murals, bus station waiting halls, airports, medical institutions, high-speed rail stations, financial institutions, and other interior and exterior wall decoration fields. Enamel steel plates can be used for the decoration and decoration of public places with high environmental requirements, such as shopping malls, lobbies, restaurants, bus booths, subways, tunnels, airports, hospitals, etc.
